

CIA in AMS Website

CIA Principle	Where in AMS website	What it does	Status
Confidentiality	Login pages: /admin, /staff, /student	Only authenticated users can enter the system.	Implemented
Confidentiality	Role-based panels	Super Admin/Coordinator use Admin panel, Reviewer/Supervisor uses Staff panel, Student uses Student panel.	Implemented
Confidentiality	MFA / Two-factor authentication	Adds second verification step after password login.	Implemented
Confidentiality	Coordinator approval	New coordinator accounts cannot access the system until approved by Super Admin.	Implemented
Confidentiality	Grade Export access	Coordinators only see/export grades for semesters assigned to them.	Implemented
Confidentiality	Student marks view	Students only see their own marks, not other students marks.	Implemented
Integrity	Evaluation form validation	Scores must be numeric and cannot exceed the criterion maximum.	Implemented
Integrity	Save Draft / Submit Evaluation	Marks can be edited before submission, then become locked/read-only after submission.	Implemented
Integrity	Grade consolidation	System calculates final marks from submitted evaluations instead of manual calculation.	Implemented
Integrity	Override mark with reason	Coordinator can override final marks, but must provide a reason.	Implemented
Integrity	Unlock submitted evaluation	Coordinator can unlock an assessment for correction; old consolidated marks are cleared.	Partial
Integrity	Soft deletes	Records are not immediately removed, helping preserve history.	Implemented
Integrity	Audit log table / Recent Activity	The system has audit-log structure, but many actions are not actually logged yet.	Partial
Availability	Laravel /up health route	Basic health endpoint exists for checking if the app is running.	Implemented
Availability	Simple pagination and SPA navigation	Helps the admin pages load faster and stay usable.	Implemented
Availability	Bulk import templates and validation	Allows faster creation of users, projects, and rubrics without manual entry.	Implemented
Availability	Backup, redundancy, restore, monitoring	Not found in the repository. This is the weakest CIA area.	Not implemented

Short version:

- Confidentiality is mainly in login, MFA, role-based panels, coordinator approval, and scoped grade access.
- Integrity is mainly in mark validation, draft/submit locking, grade consolidation, override reason, unlock flow, soft deletes, and partial audit logging.
- Availability is mainly in health check, performance improvements, pagination, and bulk import, but real backup/monitoring is still missing.
